

FEP® Blue Focus Formulary (907)

Effective May 9, 2019

The FEP formulary includes a preferred drug list which is comprised of Tier 1, generics and Tier 2, preferred brand-name drugs, preferred generic specialty drugs, and preferred brand-name specialty drugs.

Ask your physician if there is a generic drug available to treat your condition. If there is no generic drug available, ask your physician to prescribe a preferred brand-name drug.

The preferred brand-name drugs within our formulary are listed to identify medicines that are clinically appropriate and cost-effective.

INTRODUCTION

FEP is pleased to provide the 2019 *FEP Blue Focus Drug Formulary* as a useful reference for drug product coverage. The drugs on the *FEP Blue Focus Formulary* have been reviewed by the FEP Pharmacy and Medical Policy Committee and FEP physicians and pharmacists and found appropriate for preferred status.

All the information in the *FEP Blue Focus Formulary* is provided as a reference for drug therapy coverage. Specific drug selection for an individual patient rests solely with the prescriber.

National guidelines can be found on the National Guideline Clearinghouse site at <https://www.ahrq.gov/gam/>, on the websites listed under each therapeutic class and on the sites listed in the WEBSITES section of this publication.

PREFACE

The formulary is organized by sections, which refer to either a drug class or disease state. Unless exceptions are noted, generally all dosage forms and strengths of the drug cited are included in the formulary.

The *FEP Blue Focus Formulary* is a closed formulary that does not cover all FDA-approved drugs. Coverage consists of mainly generics, some preferred brands, and preferred specialty drugs.

The formulary is separated by Tiers in the following manner:

	Tier 1	Tier 2
	Preferred generics	Preferred brand-name, preferred generic specialty, and preferred brand-name specialty
FEP Blue Focus Preferred Retail Pharmacy	\$5 copay for a 0 to 30-day supply \$15 copay for a 31 to 90-day supply	40% coinsurance (up to \$350 for a 0 to 30-day supply)***
FEP Blue Focus Specialty Drug Pharmacy Program***		40% coinsurance (up to \$350 for a 0 to 30-day supply)

*** Specialty medications are limited to a 30-day supply. If a 31 to 90-day supply of a specialty drug has to be dispensed due to manufacturer packaging, you pay 40% of the Plan allowance (up to a \$1,050 maximum) for each purchase.

Drug products shown in **boldface** type indicate generic availability.

PRIOR APPROVAL

Prior approval (**PA**) is required for certain drugs before FEP will cover them. The prescribing physician may request PA by calling toll-free 1-877-727-3784. The list of prior approval medications is subject to change. For a current list of medications that require prior approval please see our [Prior Approval](#) web page.

QUANTITY LIMITATIONS

Quantity limitations (**QL**) have been established for some of the medications covered by FEP. Requests for quantities greater than allowed can be submitted to the Prior Approval program by the prescribing physician by calling toll-free 1-877-727-3784. The list of medications that have quantity limitations is subject to change. For a current list of medications with quantity limitations please see our [Prior Approval](#) web page.

PHARMACY AND MEDICAL POLICY COMMITTEE

The role of the FEP Pharmacy and Medical Policy Committee includes the evaluation of new medications, and making recommendations to FEP for their designation as preferred or non-covered on the *FEP Blue Focus Formulary*. The FEP Pharmacy and Medical Policy Committee is made up of physicians and pharmacists who are not employees or agents of, nor have financial interest in FEP.

PRODUCT SELECTION CRITERIA

The FEP Pharmacy and Medical Policy Committee will consider U.S. Food and Drug Administration (FDA) approved drugs for preferred status designation on the *FEP Blue Focus Formulary*. The evaluation includes a literature review; expert opinion may also be sought. Formal reviews are prepared that typically address the following information:

- Safety
- Efficacy
- Comparison studies
- Drug interactions
- Approved indications
- Formulation and administration
- Adverse effects
- Contraindications
- Pharmacokinetics
- Patient compliance considerations
- Medical outcome and pharmacoeconomic studies

When a new drug is considered for preferred status on the *FEP Blue Focus Formulary*, an attempt will be made to examine the drug relative to similar drugs currently preferred on the *FEP Blue Focus Formulary*. In addition, entire therapeutic classes are periodically reviewed. The class review process may result in a non-covered designation to drug(s) in a particular therapeutic class, in an effort to continually promote the most clinically useful and cost-effective agents.

Drugs evaluated by the Pharmacy and Medical Policy Committee and not classified as preferred receive a non-covered designation in the *FEP Blue Focus Formulary*. This designation indicates the Pharmacy and Medical Policy Committee's belief that the drug offers no important clinical or cost advantage over comparable preferred drugs, or that there is currently insufficient information to determine its appropriate clinical role.

All the information in the *FEP Blue Focus Formulary* is provided as a reference for drug therapy selection. The final choice of a specific drug selection for an individual patient rests solely with the prescriber.

FORMULARY PRODUCT DESCRIPTIONS

To assist in understanding which specific strengths and dosage forms are preferred, examples are noted below. The general principles shown in the examples can usually be extended to other entries in the book. Any exceptions are noted.

Preferred products include all strengths and dosage forms of the cited brand-name product.

cefixime *Suprax*
Chewable tablets, capsules and all strengths of Suprax suspension would be included in this listing.

When a strength or dosage form is specified, only the specified strength and dosage form is preferred. Other strengths/dosage forms of the reference product are not.

acyclovir *Zovirax crm*
The cream dosage form of Zovirax is preferred. From this entry, the capsules, tablets, suspension and ointment cannot be assumed to be on the list unless there is a specific entry.

Extended-release and delayed-release products require their own entry.

sitagliptin/metformin *Janumet*
The immediate-release product listing of Janumet alone would not include the extended-release product Janumet XR.

sitagliptin/metformin ext-rel *Janumet XR*
A separate entry for Janumet XR confirms that the extended-release product is on the formulary.

GENERIC SUBSTITUTION

Generic substitution is a pharmacy action whereby a generic version is dispensed rather than a prescribed brand-name product. **Boldface** type indicates generic availability. However, not all strengths or dosage forms of the generic name in boldface type may be generically available. In addition, boldface type may indicate that the brand name cited is a generic. Examples of the latter include Levoxyl and Trivora.

One way to reduce out-of-pocket cost is by requesting a generic drug. Generic drugs are usually priced lower than their brand-name equivalents. Prescription generic drugs are:

- Approved by the FDA for safety and effectiveness, and are manufactured under the same strict standards that apply to brand-name drugs.
- Tested in humans to assure the generic is absorbed into the bloodstream in a similar rate and to the same extent as the brand-name drug. Generics may be different from the brand in size, color, and inactive ingredients, but this does not alter their effectiveness or ability to be absorbed just like the brand-name drug.
- Manufactured in the same strength and dosage form as the brand-name drugs.

When a generic drug is substituted for a brand-name drug, you can expect the generic to produce the same clinical effect and safety profile as the brand-name drug.

DRUG EFFICACY STUDY IMPLEMENTATION DRUGS

Drugs first marketed between 1938 and 1962 were approved as safe but required no showing of effectiveness for FDA approval. Since 1962, all new drugs are required to be both safe and effective before they can be marketed. The legislation that resulted in this change also applies retroactively to all drugs approved as safe from 1938-1962. The Drug Efficacy Study Implementation (DESI) program was established by the FDA to review the effectiveness of these pre-1962 drugs for their labeled indications, and a determination of fully effective was made for most of these products and they remain in the marketplace. A few DESI products remain classified as "less than fully effective" while awaiting final administrative disposition. Also classified as DESI are many products listed as identical, similar, or related to actual DESI products.

EDITOR

Your comments and suggestions regarding this *FEP Blue Focus Formulary* are encouraged. Your input is vital to this formulary's continued success. All responses will be reviewed and considered. Please send your comments to:
